San Diego State University Health & Human Services in Madrid

Proposed Program Itinerary

The following itinerary is tentative and for planning purposes only. The San Diego State University in Madrid program will be divided into 2 groups at enrollment of 44 students or above, and will rotate to each academic visit, apart from the first lecture. Both groups will participate in cultural activities together. ISA will begin confirming the final program itinerary approximately four to six weeks prior to departure in close collaboration with San Diego State University faculty and staff. Should unforeseen circumstances compromise the agreed upon program itinerary, the ISA overseas staff and ISA Austin will work closely with the San Diego State University faculty and staff to identify appropriate alternatives.
